

REQUEST FOR QUOTATION – BS 12/2022

SUPPLY AND DELIVER BATTERIES FOR SUBSTATION 1 AND 4 DC TRIPPING UNITS AT THE DURBAN ICC

1. Background

The Durban ICC is one of the most advanced and one of the leading events and meetings destination. In order to maintain the extremely high international standards as a facility and to ensure optimum operation, it is important that the facility is maintained at the highest standard and that all statutory inspections are regularly conducted according to the Occupational Health and Safety Act.

2. Purpose

The MV Substation maintenance represents a complex and critical physical asset that requires effective and cost effective maintenance in order to improve equipment life-cycle, reliability and also to minimise/eliminate downtime.

The MV switchgear has a trip coil that will be activated in case of a fault condition, the battery charger supply 110 Volts DC via the vented NiCad batteries. In the event that the batteries are not holding a charge, the breaker will not trip and the fault will be on the system for much longer until the fault can be cleared. In most cases, should this not happen, the panel could fail and this may have a negative effect on the rest of the panels resulting in the substation burning down. Therefore, it is important that that battery charger is serviced every 3 months. These batteries have a useful life of maximum 5 years and are now overdue for changing.

The Durban ICC requires the services of a suitably qualified and experienced service provider to supply, install and commission batteries for Substation 1 MV switch gear at the Durban ICC, in accordance with the OHSACT and related statutory regulations.
